

Caplinked™

Data Room Software

What is CapLinked?

CapLinked provides secure and easy-to-use virtual data room solutions, which serve as central platforms for enterprises to share sensitive information easily and securely.

Setup your workspace data room in under 10 minutes, then edit, share, and collaborate on documents faster than ever before with Caplinked's intuitive interface. No more emailing documents back and forth and losing track of confidential information. Focus on your work, not your data room.

Welcome to your new virtual data room for sharing information and securing data that matters.

It's a New Day For Data Rooms

Since going live in 2012, Caplinked has set the standard for virtual data rooms. We've also made these once pricey platforms accessible to businesses and agencies of all types and sizes.

Our government clients are using our cloud based software for the secure, encrypted hosting and sharing of council minutes or other critical records. When you need to mitigate risk and protect your reputation, you can count on Caplinked.

Find out how you can use a data room in ways you never thought possible.

Secure Sharing of Council Records

What is a Virtual Data Room?

Virtual data rooms were originally created to provide a reliable, and secure method of sharing confidential materials during the due diligence phase of critical business transactions like asset sales, or mergers and acquisitions. The cost to use these platforms was extremely high, and for some platforms, still is since they operate from their own, non-cloud based server farms. For data room software that has transitioned to a cloud model, it brings the price point to a level where any organization can use these **encrypted platforms** for hosting and sharing information without the fear of it getting into the wrong hands. Data rooms have become a perfect fit for government entities to secure and share council records or other critical materials.

Digital Rights Management - Protecting Downloaded Files

Digital rights management (DRM) functionality provides complete control over how a document is used, edited, copied or even printed. FileProtect lets you share documents while retaining the ability to deny access to anything even after it's downloaded. Your council members will appreciate the freedom to download files for use outside of a data room, and you will enjoy peace of mind with the ability to rescind access at any point in the future. Manage your digital rights easily, securely, and at the click of a button. FileProtect is the digital rights management solution for all of your file sharing needs.

Setting User Permissions

As a city clerk, or records manager, you want to be 100% confident that the parties accessing documents have permissions set properly to view, download, or upload as required. Caplinked provides an easy to use folder level hierarchy that's color-coded to ensure you've granted access as needed. In some cases, you may choose to have files only viewable within the platform, and in others, you may grant download access while eliminating the ability to share, or print those documents.

Activity Reporting

Caplinked provides robust reporting capabilities which allows administrators to see details on a variety of activities that take place in your workspace including how long each file has been viewed. See group level, user level, or file level activity with the click of a button.

See why government agencies are choosing Caplinked to share their most critical documents and files. **Contact us today!**
